

MAKING FINS SECTION

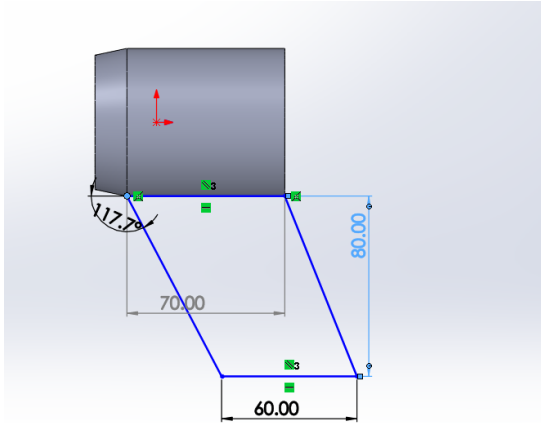

STEP 1: MAKE THE AIR FOIL SECTION AND MIRROR ABT THE CENTER LINE IN FRONT PLANE

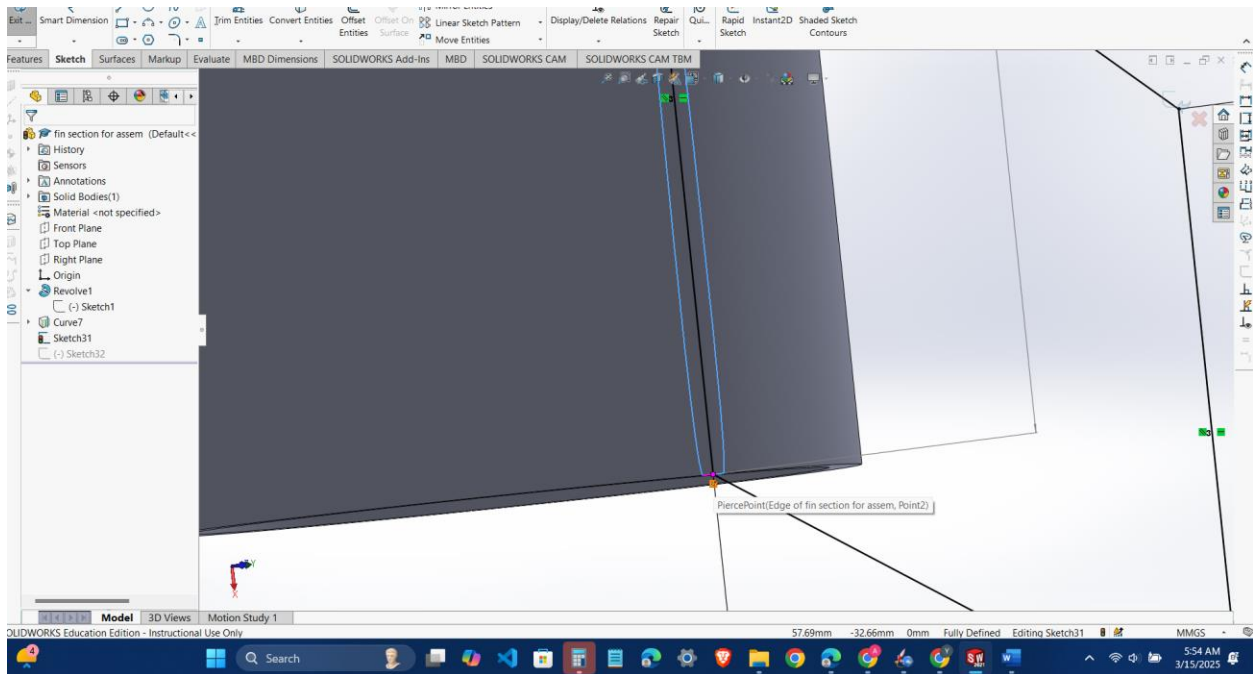

Make sure that its sharp in the front to reduce drag and both the edges up and down are related.

Three center lines and , bottom one collinear , second one over the second mid point and third one at the final mid point,

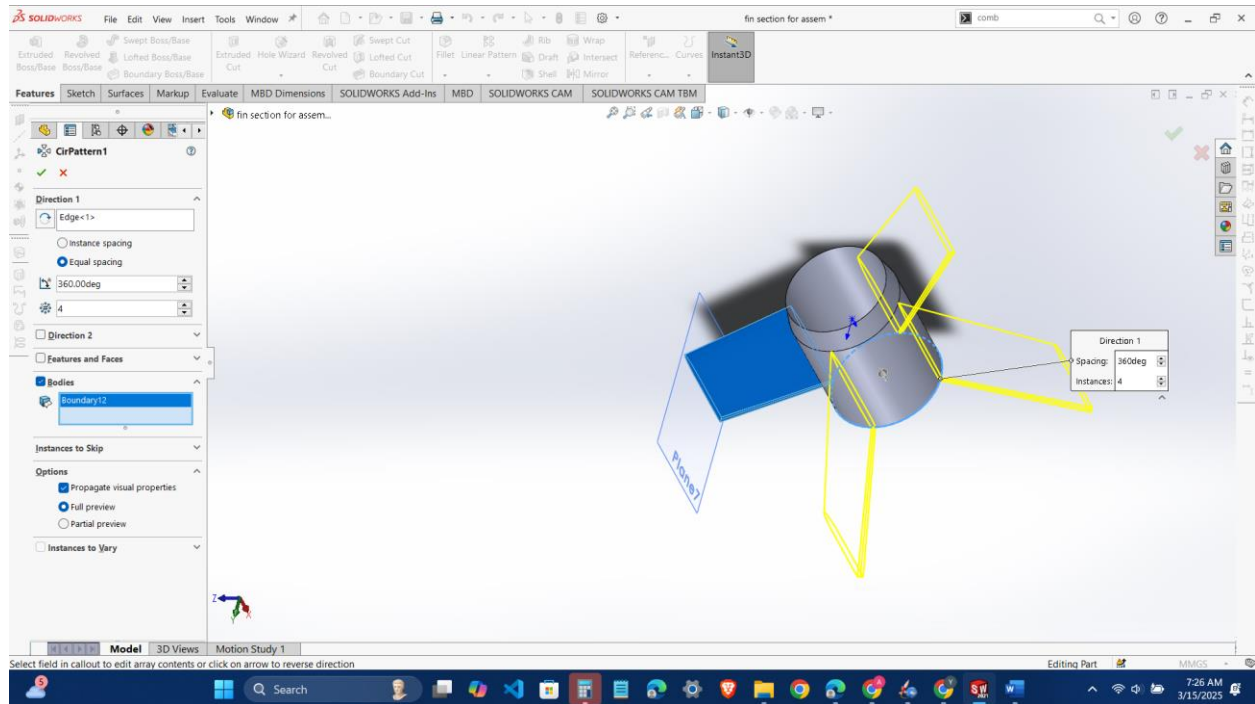

NEXT MAKE THE ACTUAL FIN SHAPE

give relations pierce to the airfoil

Next circular pattern and later combine

And now that fillet

For curve fillet will not be possible use the other type of fillet for the curve , and select the two faces
